News Release

Avwatch Teamed on Government Multiple Award Contract (MAC) Agreement

Boston, Mass. –Avwatch Inc., a proven leader in advanced aerial reconnaissance, announced today that it has been included as a teaming member on an awarded a SeaPort-e contract vehicle with teaming partner eFedSystems Corporation.

The contract, a product of a detailed application process, signifies Avwatch's dedication to putting its innovative technology into the hands of the overall Navy and Marine Corps organizations in a cost effective way. As a teaming member on SeaPort-e, Avwatch can rapidly respond to the needs of the Fleet, Joint Commanders, Naval Sea Systems Command, Naval Air Systems Command, Space & Naval Warfare Systems Command, Naval Supply Systems Command, Military Sealift Command, Naval Facilities Command, Strategic Systems Programs, Office of Naval Research, and the United States Marine Corps, by providing services that potentially span the entire spectrum of mission areas supported by the activities and technical capabilities. Additionally, Avwatch can also support other Department of Defense (DoD), non-DoD, or Joint Agencies for work that is integrally related to mission areas.

Through its cutting-edge aerial imaging technology, robust software systems and Mobile Ad Hoc Networking (MANET), Avwatch has already forged a rich portfolio of operational successes in the Special Forces Community, Department of Defense, Department of Homeland Security, and other state and local responders.

At the U.S. Marine Corps Mountain Warfare Training Center (MCMWTC) in Bridgeport, CA, Avwatch continuously provides surrogate UAS support (Shadow, MQ-1B Predator/MQ-9 Reaper), to support relevant and up-to-date training. This effort includes mission planning, quality control, exercise coordination and after event action reports to ensure events are effective.

Between October 2008 and July 2012 Avwatch provided surrogate UAS support (MQ-9 Reaper) support for more than 20 Patriot 7 exercises conducted at Fort Pickett. In that capacity Avwatch provided FMV downlink support for SEAL Team 2 and SDV Team 2 during one of those exercises. Over the nearly four year period of exercise support Avwatch maintained a 100% operational mission capacity by investing in ready spares for all critical components.

Looking ahead, Avwatch aims to further enhance the engineering and analytical disciplines required to ensure the warfighter and technical support community is provided with adequate instruction including applied exercises, resulting in the attainment and retention of knowledge, skills, and attitudes regarding the platforms, systems, and warfighting capabilities Avwatch currently operates and maintains.

"Historically in all of these, the speed and efficiency that tactical information is gathered, disseminated and processed ultimately determines the overall effectiveness of the response," said Avwatch president Chris Kluckhuhn. Through teaming with eFedSystems, Seaport-e will make it considerably easier for decision makers in Government Agencies to take advantage of the company's technology and expertise.

About Avwatch: Chris Kluckhuhn, a former Coast Guard rescue pilot, founded Avwatch, Inc. in 2008 to focus on improving airborne technology capabilities for homeland security professionals. Avwatch has quickly become a valued resource for rapid prototyping and innovation offices in the DOD and DARPA. In addition to traditional ROVER and CAS support, Avwatch provided a leading role in testing and implementing Mobile Ad Hoc Networking (MANET) technology. Avwatch, Inc. is a SDVOSB with past performance providing support and services to the DoD.
